-----	--

## Torque specifications

	Nm
Oil filler and drain plug	50

## Special tools

## Commercial tools

14 mm hex. driver insert, 1/2" square drive	obtain locally
---	----------------

**Note:** When checking fluid level, the vehicle should be level.

- Remove filler plug.

**Note:** If more than approx. 50 cc of fluid flows out of filler hole, the multi-disc clutches AV or ZS are leaking. Check oil level in hydraulic oil reservoir in engine compartment.

Repair or replace transfer case.

- The fluid level is correct, if a small amount of fluid flows out or if fluid level extends up to lower edge of opening.

If not, add fluid.

- Install filler plug and torque to 50 Nm.
